

Los **tuberculomas** del tronco del encéfalo son bastante inusuales, lo que representa menos del 5% de todos los tuberculomas intracraneales.

Se publican generalmente por sus manifestaciones clínicas

Se ha descrito un **síndrome medular lateral** (Verma y Sharma, 2011).

Se pueden presentar como una alteración de la motilidad ocular de forma aislada (Kumar y col., 2008; Lolly y col., 2011; Sharma y col., 2012).

Como **síndrome de Millard Gublar** (Sharif y col., 2010).
